120. Triangle

link

很简单的从下往上,但是没有在list里面改值,可能是因为如果改了input会有线程安全的问题??

```
public int minimumTotal(List<List<Integer>> triangle) {
   int size = triangle.size();
   if(size == 0) return 0;
   int[] res = new int[size];
   int min = triangle.get(0).get(0);
   for(int i = 0; i < size; ++i){
      res[i] = triangle.get(size - 1).get(i);
   }
   for(int i = size - 2; i >= 0; --i){
      List<Integer> current = triangle.get(i);
      for(int j = 0; j < i + 1; ++j){
        res[j] = current.get(j) + Math.min(res[j], res[j + 1]);
      }
   }
   return res[0];
}</pre>
```
